

## Online Shopping System

Jishab K. Shetty  
18M18CS118

A user friendly application which consists of a secure login along with different features to make payment faster and efficient. It also provides a range of accessories along with sorting options.

- The is used by 2 people user and the admin
- The admin can view user info, the user can edit their own info and can access the products, also add them to the cart
- The products are divided into different categories, electronics, fashion, groceries, Home misc,
- Once the cart is ready to order, the user can place the order, after which they have to compulsorily give an online payment, then only the delivery is placed
